

### Suggested Sources for Chemical Containers

When using chemicals such as disinfectants and even shampoos and dips in the veterinary practice, it is commonplace to dilute them prior to use. In most practices, it is a challenge to maintain a consistency in the dilution factor and to actually mix the concentrate with water safely. Experience has shown that it is usually easier and more accurate to dilute larger quantities less frequently than smaller quantities often. It is also noted in practices that “pre-mix” bulk quantities of diluted chemicals waste from spillage and improper mixing is greatly reduced.

- 5 Gal. Deluxe Dispenser  
Item No.: 31996LT Approx \$15.00 each

Unique heavy-walled polyethylene container has an 83mm and a 38mm opening for filling in either vertical or horizontal position. No-leak faucet can be positioned independently of its screw cap. Smaller faucet extension permit easy filling for small-neck containers. Large comfortable handle and hand grip in rear. Embossed with 1/2 and 1 gallon graduations.

#### Alternatives (not pictured)

- 5 Gallon Economy Dispenser (does not have filling opening at the top; bottle is filled by standing on end and unscrewing the spigot)  
Item No. 31982LT Approx \$13.00 each
- 2.5 gallon Dispenser  
Item No. 31987LT Approx \$12.00 each
- Dispensing Rack  
Large Rack - Item No. 31991LT Approx \$76.00  
Mini Rack - Item No. 31993LT Approx \$47.00

Racks will not corrode or rust. Choose from large rack (five shelves) or new mini-rack (three shelves). Easy assembly - No nuts, bolts, or screws. Racks are not required for using the bottles, but make it very “clean” in the bathing area or janitor’s closet.

The following devices are also useful for controlling liquid chemicals.
